Response to Amendment

Applicant's Amendment A, filed on 1/6/03 is acknowledged. This amendment has canceled claims 1-13, 15-20 and 23-27. New claims 34-40 are acknowledged. New claims 35-40 include SEQ ID NOs. 29-41. Upon consideration of Applicant's Amendment A, it was determined that a search of SEQ ID NOs. 29-41 would constitute an undue burden on the Patent and Trademark Office due to complex nature of the search and corresponding examination of more than one (1) of the claimed antisense sequences listed in claims 35-40. The following sequence restriction requirement is necessitated by applicant's amendment to the claims.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Pursuant to 35 U.S.C. 121 and 37 C.F.R. 1.141, the sequences of claims 35-40 are restricted to **one** sequence. The Commissioner has partially waived the requirements of 37 C.F.R. 1.141 and will permit a reasonable number of such nucleotide sequences to be claimed in a single application. Under this policy, up to 10 of independent and distinct nucleotide sequences will be examined in a single application (see MPEP 803.04 and 2434).

The inventions specifically claim antisense targeted to regions (active site) corresponding to SEQ ID NOs: 29-41, which modulate the expression of JNK. Although the antisense sequences claimed each target and modulate expression of the same gene, the instant antisense sequences are considered to be unrelated, since each antisense sequence claimed is structurally and functionally independent and distinct for the following reasons: each antisense sequence has a unique nucleotide sequence, each antisense sequence targets a different and specific region of

Art Unit: 1635

JNK, and each antisense, upon binding to the JNK gene, functionally modulates (increases or decreases) the expression of the gene and to varying degree (per applicant's Table 9 in the specification). Furthermore, a search of more than one (1) of the antisense sequences presents an undue burden on the Patent and Trademark Office due to the complex nature of the search and corresponding examination of more than one (1) of the claimed antisense sequences. In view of the foregoing, one (1) antisense sequence is considered to be a reasonable number of sequences for examination. Accordingly, applicants are required to elect one (1) antisense sequence to be examined with the elected invention, which invention is restricted thereof.

Because a separate search would be required for each one of the target sequences of claims 35-40, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this sequence requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
